        <========================= RBIN =============================>
                        A command-line Recyclebin for Linux
    --------------------------------------------------------------------------

     Authour: Anji Babu Kapakayala
             IIT Kanpur, India.

     Report bugs:  anjibabu480@gmail.com

    Laungauge: Shell/Bash

     Description:

        RBIN is a software which acts as a RECYCLEBIN" to delete and restore the
        files in Linux. Restores the selected file/directory to its original
    location.
        And deletes the files perminantly whose deletion date is more than 30 days.

     Features:

        rbin                 ---> main excutable and deletes given files
        rbin -d/--del        ---> Deletes the files or Directories
        rbin -r/--restore    ---> Restores the given files.
        rbin -e/--emptybin   ---> Will empty the recyclebin
        rbin --SetAutoclean  ---> Options: on , off, Period_of_days to clean the bin
        rbin -h/--help       ---> Prints the information about rbin.
        rbin -f/--force      ---> Deletes the given file perminantly

     Directories:

        recyclebin           ---> Place to store the deleted files
        recyclebin/.cache    ---> Contains the information about deleted files
                (date of deletion & original location)

     Examples:

        rbin *               ---> Deletes all files from current directory.
        rbin -r *            ---> Restores all files from recyclebin.
        rbin -f *            ---> Removes all files perminantly from current
    directory.
        rbin file1           ---> Deletes the file1
        rbin -r file1        ---> Restore the file1
        rbin -e              ---> Makes recyclebin empty.
        rbin -s              ---> Allows to ON or OFF Auto clean feature.
        rbin anji_*          ---> Deletes all files starts with anji_
        rbin file1 file2 dir1 ---> Deletes file1 file2 dir1
        rbin file_[1-3]*     ---> Deletes starts with file_1* file_2* file_3*

        rbin works perfectly with wildcards like *, [1-5], String*, etc.

     Cheers!
     Anji Babu
