

# BlockFund

A decentralized fund raiser platform to raise crypto for social causes.

# What is BlockFund ?

Blockfund is a Decentralized FundRaising Platform for social causes. It's build on top of Tezos Blockchain. It aims to deliver better results for funding the social causes and saving the world.

Live Url: <https://blockfund.biz>

## How can we use it ?

- Step 1: A organization or a person can create a cause for which he/she wants to raise funds for.
- Step 2: Then other people who wants to donate to that cause can send the XTZ from there wallet.
- Step 3: Then the owner (Only Owner) who created the cause can withdraw the funds.

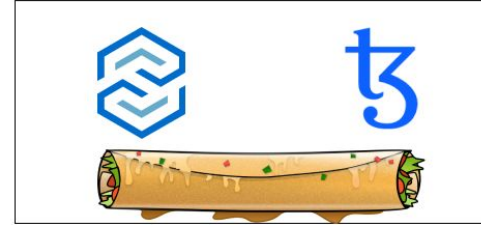

# Architecture

1. Linode
2. Nginx
3. Tezos
4. SmartPy
5. Taquito
6. VueJs
7. Quasar
8. Tezos

**Nginx + Linode**

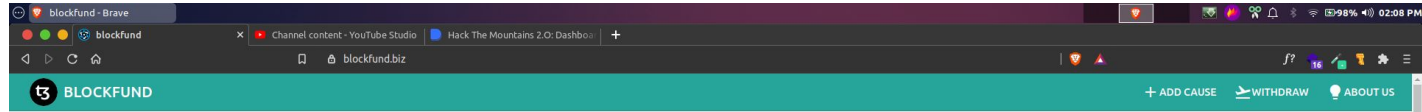

**Tezos Taquito & SmartPy**

**Vue.JS and Quasar**

# Let's See

# Create Cause

You can use create a new cause to raise money for your cause.

By clicking on the Add Cause Button and providing the title and signing the transaction.

Crte a new cause on blockchain

A form for creating a new cause on blockchain. It features a text input field labeled 'Cause Title' with a placeholder 'Title for the cause'. Below the input field are two buttons: a blue 'SUBMIT' button and a teal 'CONNECT TO WALLET' button. Red arrows and numbers indicate the flow: arrow 1 points to the 'Cause Title' field, arrow 2 points to the 'CONNECT TO WALLET' button, and arrow 3 points to the 'SUBMIT' button.

# Fund Cause

You can fund cause by clicking on the Donate button on a cause.

+ ADD CAUSE > WIT

## Problem it solved.

This is the time when Web3.0 is booming and along with it the craze and the use cases of Blockchain based technologies is going to be the new present, the amount of people investing on cryptocurrencies are also rising specially in india. But we are also going through a lot of Natural Crises like Covid19, WhiteFungus, BlackFungus, Insufficient amount of Oxygen cylinders which causes a lot of deaths in India. These are the kind of causes my product BlockFund is targeted on. As the no. of people using the crypto increases the donations using the crypto will also increase.

Another aspect of BlockFund is transparency, since it's built on top of blockchain it's fully transparent and there is no central authority who is controlling this platform, there will be no fraud where the singer person can withdraw or scam the site.

**Since everyone is anonymous, what if a scammer tries to raise fund ?** We can solve this problem by first validating the person/Organization who wants to raise funds. I didn't have time to implement it, but it'll be done in the future development.
