

# Welcome to morphir

A library of tools that works to capture business logic as data.

**For the first time, business logic can be shared, stored, translated and visualised, all with the reliability of standardisation ensured in the Morphir framework.**

## What is it?

A set of tools for integrating technologies. Morphir is composed of a library of tools that facilitate the digitisation of business logic into multiple different languages & platforms. The Morphir framework is unique too in that facilities elements of automation and conversion that were previously unavailable in the field of finance-tech.

## Why is it important?

Makes business logic portable. Business logic digitised provides distinct advantages: capacity for movement across departments and fields & the ability to be converted to new languages and applications.

Allows for use of existing and future tools. Morphir ensures that entered business logic conforms to strict standards, future-proofing new languages and application modelling adaptations as well as current.

## How does it work?

Defines a standard format for storing and sharing business logic. A clear set of standards and format is in-place from the input/output, allowing for coherent structure.

Provides APIs and tools to integrate technologies. Once your business logic is converted into developer-friendly data, ease of integration and assimilation into new environments is possible.

# Morphir is a library of tools that works to capture business logic as data.

## What are the Benefits?

### Eliminates technical debt risk

Refactoring code libraries is often a harmful and time-sensitive issue for businesses, Morphir ensure the standards introduced from input eliminate delays at deployment.

### Ensures correctness

Certifying that specified functions behave as intended from input to output is assured through the Morphir library / tool chain.

### Increases agility

Adaptability and usability are key concepts of the Morphir framework, business logic can now move with the code, be easily understood and adopted, in an ever-developing eco-system.

### Disseminates information through automation

Morphir's automated processing helps disseminate information which otherwise may not be understood or shared at all, a useful tool when brining elements of business logic to conversation outside of its immediate audience (i.e developers).

## An ecosystem of innovative features.

Supporting the development of your business' needs in an ever-developing ecosystem based on firm standards and the integration of new languages.
