repräsentative Poynter-Media-Trust-Umfrage (Guess & Nyhan & Reifler, 2017). Darin gab zuletzt nur jeder siebte (14 Prozent) Unterstützer der republikanischen Partei an, den Massenmedien zu vertrauen. Diese Menschen billigen zudem deutlich häufiger extreme Behauptungen, in denen Medien der Lüge bezichtigt werden. Mehr als die Hälfte der Befragten (60 Prozent) stimmten der Aussage des Präsidenten zu, Medien seien "Feinde des amerikanischen Volkes".

Fake-News für Republikaner?

»Ich vertraue den Massenmedien!« Wie sehr stimmten US-Amerikaner je nach politischer Richtung dieser Aussage in den vergangenen 20 Jahren zu?

Nie zuvor lagen Anhänger der Demokraten weiter auseinander mit Anhängern der Republikaner als im Jahr 2017.

Quelle: Gallup (Meinungsforschungsinstitut) • Daten

Im Gegensatz dazu gaben 72 Prozent der Demokraten an, den Medien zu vertrauen – ebenfalls ein Rekord. Seit den Terroranschlägen vom 11. September 2001 habe es so eine Unterstützung nicht gegeben, schreiben die Autoren der Studie. Offenbar hoffen Anhänger der Demokraten, dass eine unabhängige Presse den Präsidenten für seine Taten und Entscheidungen verantwortlich macht, gerade in einer Zeit, in der seine republikanische Partei beide Kammern des Kongresses kontrolliert. Dazu passt, dass vor allem die vom Präsidenten verhassten Zeitungen *New York Times* und *Washington Post* im vergangenen Jahr Hunderttausende neue Abonnenten dazugewonnen haben.

zum Skitourenfahren gehen will, sollte sich auf diese Informationen stützen und braucht die dazu nötige Ausbildung.

ZEIT ONLINE: Werden nicht auch extra Lawinen gesprengt, bevor sie von selbst abbrechen?

Stucki: Ja, auf diese Weise schützen die lokalen Lawinendienste Straßen oder Skipisten. Während solcher Lawinensprengungen werden in Skigebieten Pisten zeitweise gesperrt. Sie werden danach aber wieder freigegeben. Dass der Betrieb in einem ganzen Skigebiet eingestellt wird, kommt eher selten vor, zum Beispiel wenn wegen schlechten Wetters nicht gesprengt werden kann, die Präparation aufgrund von sehr viel Schnee mehr Zeit braucht oder es stürmt. Selbstverständlich sind die Leute gehalten, sich an die Anweisungen der lokalen Behörden zu halten, also zum Beispiel gesperrte Wege nicht zu begehen.

ZEIT ONLINE: Wie können Skifahrer, Snowboarder und Tourengänger, die im freien Gelände unterwegs sind, Unfälle vermeiden?

Lawinentote in den Schweizer Alpen

Häufigkeit von tödlichen Lawinen-Unfällen je nach Region in den Jahren 1997 bis 2017

Landwirtschaft. Jeder dritte Job hänge von Wasser ab. Im Umkehrschluss heißt das: Ohne Wasser haben viele Menschen schlicht keinen Job oder keine Ernte.

Gefahr durch unsicheres Wasser

Kochen, persönliche Hygiene, die Wohnung sauber halten und Wäsche waschen: Auch für diese Dinge wird ungefährliches Wasser benötigt. Wo das fehlt, wird gezwungenermaßen verunreinigtes Wasser genutzt. Die Folge: Erkrankungen wie Cholera oder Bilharziose, die im Extremfall zum Tod führen können.

Tote durch verunreinigtes Wasser

Quelle: Universität Washington (Bezugsjahr 2017)

DER SPIEGEL

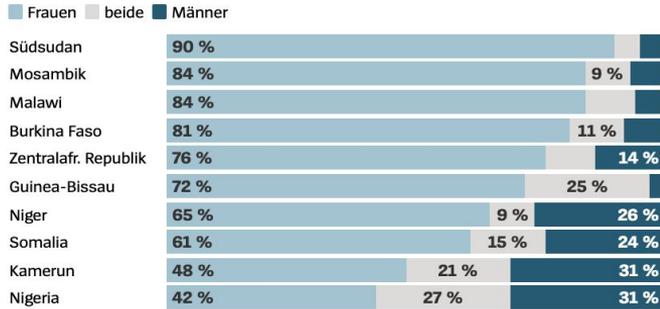

Bei Todesfällen durch verunreinigtes Wasser belegen ausschließlich afrikanische Staaten die oberen Plätze: In der Zentralafrikanischen Republik, dem Tschad, Eritrea und im Südsudan starben 2017 mehr als 100 Personen pro 100.000 Einwohner an verunreinigtem Wasser.

Der weltweite Trend ist zwar rückläufig, doch es gibt eine Ausnahme: die Zentralafrikanische Republik. Dort stieg die Todesrate zwischen 1990 und 2017 um 14 Prozent. Die genauen Ursachen sind unklar, die [anhaltende militärische Krise](#) im Land dürfte eine Rolle spielen. Im restlichen Subsahara-Afrika hat sich die Zahl der durch verunreinigtes

Wasser gleich stark trifft: Entwicklungsländer sind stärker betroffen als Industriestaaten, Alte, Kranke und Kinder stärker als gesunde Erwachsene, Landbewohner stärker als Stadtbewohner - und Frauen stärker als Männer. So sind es meist Frauen und Mädchen, die dafür zuständig sind, Wasser aus den Quellen zu holen.

Auf dem Land besorgen oft Frauen das Trinkwasser

Wer ist in ländlichen Haushalten primär für das Wasserholen zuständig?

Quelle: Unicef (Stand 2017)

DER SPIEGEL

Eine zweite Dimension der ungleich wirkenden Wasserkrise zeigt sich beim Unterschied zwischen armen und wohlhabenden Menschen: "Slumbewohner müssen sehr viel mehr für einen Liter Wasser zahlen als die Reichen, die 200 Meter weiter leben - obwohl das Wasser dort rund um die Uhr verfügbar ist und eine viel bessere Qualität hat", so Wasserexperte Stefan Uhlenbrook.

In der Zukunft wird sich das Problem der Wasserkrise voraussichtlich noch verschärfen. Dafür gibt es zwei Gründe: Einerseits gibt es schlicht mehr und mehr Menschen auf der Erde - und damit einen höheren Bedarf an Wasser. Seit den Achtzigerjahren steigt der globale Wasserverbrauch jährlich um etwa ein Prozent. Der Anstieg liegt zum Großteil am zunehmenden Wasserbedarf in Entwicklungs- und Schwellenländern, wobei deren Pro-Kopf-Verbrauch immer noch deutlich unter dem Niveau der Industriestaaten liegt.

        props: {
          ...
          recentlyEdited,
          recentlyPublished
        }
      });
    }
  }
});
```

4

View rendering

```
// routes/dashboard.js
```

```
server.route({
```

Under the hood:

```
  path: '/',
```

1. Rollup compiles **two bundles**: Server-side & client side

2. Hapi controller returns **server-side rendered page**

3. **In the browser**, load the client-side bundle to **hydrate the page**

(making it interactive)

```
    request, h) {  
      ...  
      const recentlyEdited = ...;  
      const recentlyPublished = ...  
      return h.view('dashboard/Index.svelte', {  
        props: {  
          ...  
          recentlyEdited,  
          recentlyPublished  
        }  
      });  
    }  
  }  
});
```

4

View rendering

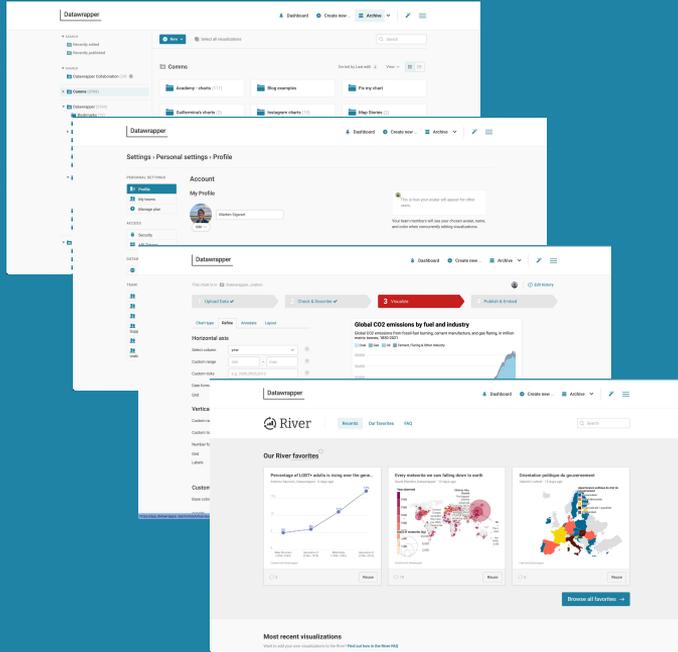

Our custom Hapi setup

```
// dashboard/Index.svelte
<script type="text/javascript">
  import MainLayout from '_layout/MainLayout.svelte';
  import RecentVisualizations from './RecentVisualizations.svelte';

  export let recentlyEdited;
  export let recentlyPublished;
  ...
</script>

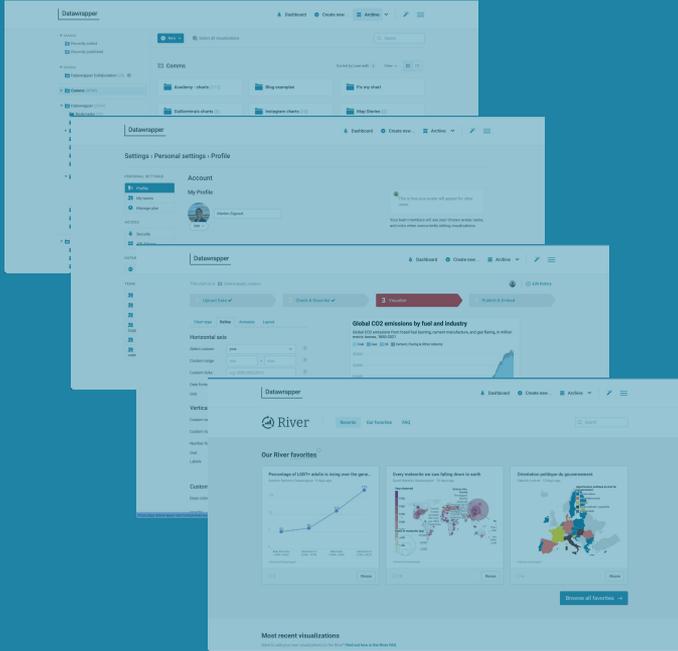

<MainLayout>
  <RecentVisualizations {recentlyEdited} {recentlyPublished} />
</MainLayout>
```

Pennsylvania reported more
new COVID-19 cases Friday
than on any other day during
the pandemic, mirroring the
same troubling trend as the
nation. Meanwhile, the Keystone
State's positive test rate is so high that
it may suggest a worrisome level of
community spread.

Pennsylvania health officials
said Friday 2,219 new cases were re-
ported, with small gatherings a signifi-
cant contributor to the surge. The in-
crease parallels a national wave of
new infections that the Washington
Post reported reached more than 30,000 new cases
Friday, the highest single day count of
the pandemic.

Some steep increases are happen-
ing in Gloucester, Burlington, Dela-

COVID fatigue is definitely setting in. People are sick of COVID.
Shawn Quinn, president of the Pennsylvania College of Emergency Physicians

← Various layout components

Migrating to SvelteKit

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
  const { chart, ... } = validation.value;

  const recentlyEdited = ...
  const recentlyPublished = ...

  return {
    recentlyEdited,
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

Migrating to SvelteKit

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
  const { chart, ... } = validation.value;

  const recentlyEdited = ...
  const recentlyPublished = ...

  return {
    recentlyEdited,
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
  const { chart, ... } = validation.value;

  const recentlyEdited = ...
  const recentlyPublished = ...

  return {
    recentlyEdited,
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

2

Validation

Migrating to SvelteKit

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
  const { chart, ... } = validation.value;

  const recentlyEdited = ...
  const recentlyPublished = ...

  return {
    recentlyEdited,
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

3

Data fetching

Migrating to SvelteKit

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
  const { chart, ... } = validation.value;

  const recentlyEdited = ...
  const recentlyPublished = ...

  return {
    recentlyEdited,
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

4

“View rendering”

Migrating to SvelteKit

```
// +page.server.ts
export const load = authServer(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
  const { chart, ... } = validation.value;

  const recentlyEdited = ...
  const recentlyPublished = ...

  return {
    recentlyEdited,
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

5

Load function “dependencies”

Migrating to SvelteKit

```
// +page.server.ts
export const load = authUser(async ({ url, ... }) => {
  depends(`charts`)
  const searchParamsSchema = Joi.object().keys(...);
  const query = Object.fromEntries(url.searchParams.entries());
  const validation = searchParamsSchema.validate(query);
  if (validation.error) {
    throw error(400, `Invalid query`);
  }
});
```

SvelteKit re-runs load function when it detects changes of its

“dependencies”

1. URL, search parameters, etc.
2. **User-declared dependencies**

```
    recentlyPublished,
  };
}) satisfies PageServerLoad;
```

Migrating to SvelteKit

```
// +page.svelte
<script lang="ts">
  import RecentVisualizations from './RecentVisualizations.svelte';

  export let data;
  $: recentlyEdited = data.recentlyEdited;
  $: recentlyPublished = data.recentlyPublished;

  function update() {
    ...
    invalidate('charts')
  }
</script>

<RecentVisualizations {recentlyEdited} {recentlyPublished} />
```

Migrating to SvelteKit

```
// +page.svelte
<script lang="ts">
  import RecentVisualizations from './RecentVisualizations.svelte';

  export let data;
  $: recentlyEdited = data.recentlyEdited;
  $: recentlyPublished = data.recentlyPublished;

  function update() {
    ...
    invalidate('charts')
  }
</script>

<RecentVisualizations {recentlyEdited} {recentlyPublished} />
```

Tell load function to re-run

Migrating to SvelteKit

```
// +page.svelte
<script lang="ts">
  import RecentVisualizations from './RecentVisualizations.svelte';

  export let data;
  $: recentlyEdited = data.recentlyEdited;
  $: recentlyPublished = data.recentlyPublished;

  function update() {
    ...
    invalidate('charts')
  }
</script>

<RecentVisualizations {recentlyEdited} {recentlyPublished} />
```

Migrating to SvelteKit

```
// +page.svelte
<script lang="ts">
  import RecentVisualizations from './RecentVisualizations.svelte';

  export let data;
  $: recentlyEdited = data.recentlyEdited;
  $: Main differences: data.recentlyPublished;

  fun 1. Reactive data
    ...
    inva: → page updates automatically when the load function re-runs
  }
</script> 2. Layout lives elsewhere

<RecentVisualizations {recentlyEdited} {recentlyPublished} />
3. File-based routing
4. Typescript
```

Lessons Learned

1. Route protection is tricky

- No built-in authentication/authorization
→ you need a custom solution
- Easy to forget
- Easy to get wrong

1. Route protection is tricky

- No built-in authentication/authorization
→ you need a custom solution
- Easy to forget
- Easy to get wrong

Our solution:

1. Wrapping auth guards
2. Custom ESLint rule
- ~~3. Middleware~~

But:

1. No correct types from auth guards
2. Protection not enforced by framework

2. Query parameter validation

- Not built-in → you need a custom solution
- Easy to forget
- Easy to get wrong

2. Query parameter validation

- Not built-in → you need a custom solution
- Easy to forget
- Easy to get wrong

Our solution:

1. No general solution (so far)
2. Pull Request reviews

But:

Less of a problem than
authentication/authorization

3. Testing

- Hapi makes integration testing easy
- No equivalent in SvelteKit
- Automated testing crucial for migration

3. Testing

- Hapi makes integration testing easy
- No equivalent in SvelteKit
- Automated testing crucial for migration

Our solution:

1. E2E tests

2. Load functions tests (involves a lot of mocking)

3. Endpoint tests with separate Vite dev server

4. Load functions and layouts are powerful, but tricky

- Break up data loading & shared UI
 - only load what's necessary, when necessary
- But a lot of “magic” → easy to mess up
- Complex layouts are difficult

4. Load functions and layouts are powerful, but tricky

- Break up data loading & shared UI

→ only load what's necessary, when necessary

- But a lot of “magic” → easy to mess up

Our solution:

- Complex layouts are difficult

1. Keep eye on performance & the network tab

2. Know what you're doing

5. Multi page → Single page pitfalls

- Data fetching in the background → client-side navigation
- No more loading indicator from the browser
→ *“nothing is happening”*

5. Multi page → Single page pitfalls

- Data fetching in the background → client-side navigation
- No more loading indicator from the browser

→ *“nothing is happening”*

Our solution:

1. Global loading indicator for client-side navigation
2. Loading indicators everywhere data is loaded
2. Be mindful of the data that's loaded

6. It's still early days

- No rich ecosystem yet → many things require custom solutions
 - Route protection, validation
 - OAuth

6. It's still early days

- No rich ecosystem yet → many things require custom solutions

- Route protection **Our solution:**

- OAuth

1. Build it

2. Outsource it to our API (which still runs on Hapi)

Maybe in the future:

Consider libraries like Auth.js

Support at the framework level

Where the Virus Is Spiking
In the Philadelphia Area

There have been more than 21,000 new
coronavirus cases in the Philadelphia area
since Sept. 1, a rise of 40 new cases per
every 10,000 residents. Glasboro's rate is
260 new cases per 10,000 residents, more
than six times the regional average.
Six other suburban municipalities or
Philadelphia zip codes have added
at least 100 new cases per 10,000
residents since Sept. 1.

Increase at or below
the average for
the region
(40 new cases
per 10,000
residents)

Increase above
the average for

Pennsylvania reported more
new COVID-19 cases Friday
than on any other day during
the pandemic, mirroring the
same troubling trend as the
nation. Meanwhile, the Keystone
State's positive test rate is so high that
it may suggest a worrisome level of
community spread.

Pennsylvania
health officials
said Friday 2,219
new cases were re-
ported, with small
gatherings a signifi-
cant contributor to the surge. The in-
crease parallels a
national wave of
new infections that
the Washington
Post reported
reached more than 30,000 new cases

“COVID
fatigue
is definitely
setting in.
People are
sick of COVID.”

what each team's trajectory would have looked like over the course of the 2020 season:

The Storm were at the top of the heap last season

Daily FiveThirtyEight Elo ratings for WNBA teams during the 2020 season

Coming off a 30-30 season without many of its best players (including Breanna Stewart and Sue Bird), Seattle worked back to full strength in 2020 and was playing at a historically high level by the end of the WNBA Finals. In addition to going 24-4 across the regular season and playoffs — tying the 2014 Mercury for the fourth-best single-season winning percentage (.857) in

Where Masks Aren't Required, Virus Cases Have Gone Up

Sixteen states recommend, but do not require, its residents to wear masks in public. In those states, new coronavirus cases have risen by 84% over the last two weeks. In the 11 states that mandate wearing masks in public, new cases have fallen by 25% over the last two weeks.

Mask-wearing requirements by state

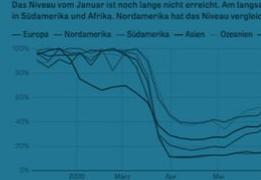

- Mandatory in public
- Employees and patrons of certain businesses
- Employees of certain businesses
- None

States where mask use is ...	New cases, June 1-7	New cases, June 15-21	Change
Mandatory in public	61,064	45,950	-26%
Required by employees and patrons of certain businesses			
Required by employees of certain businesses			
None			

Seit die ersten Corona-Vorschriften gelockert wurden, sind die Flüge aus dem Himmel wieder zu, obschon laut am 21. Juli - mitten in der Urlaubszeit - weltweit nicht abhoben, im Vergleich zu etwa 180.000 Flügen an Deutschland. Dass die Zahlen aber wieder steigen, ist ein Dienstgrad mehrheitlich auf Flüge mit Klein- und zurückzuführen.

Der Flugverkehr nimmt langsam wieder zu

Es wird gezeigt, wie viele Flüge vom jeweiligen Kontinent abgehen, diese Zahl den jeweiligen Kontinent ins Verhältnis gesetzt.

Quelle: flightstats24.com

Schlüssel: man die Flüge nach Start-Kontinenten an und wie unterschiedlich sich Corona und der Umgang der erste Einbruch zeigt sich in Asien. Anfang des Jahr Coronavirus in China verbreitet. Die anderen Kontinente März. Seit Mai nimmt die Zahl der Flüge weltweit zu, aber unterschiedlich schnell.
