

Juice Sucking Servers

and how to put them on a diet

Today

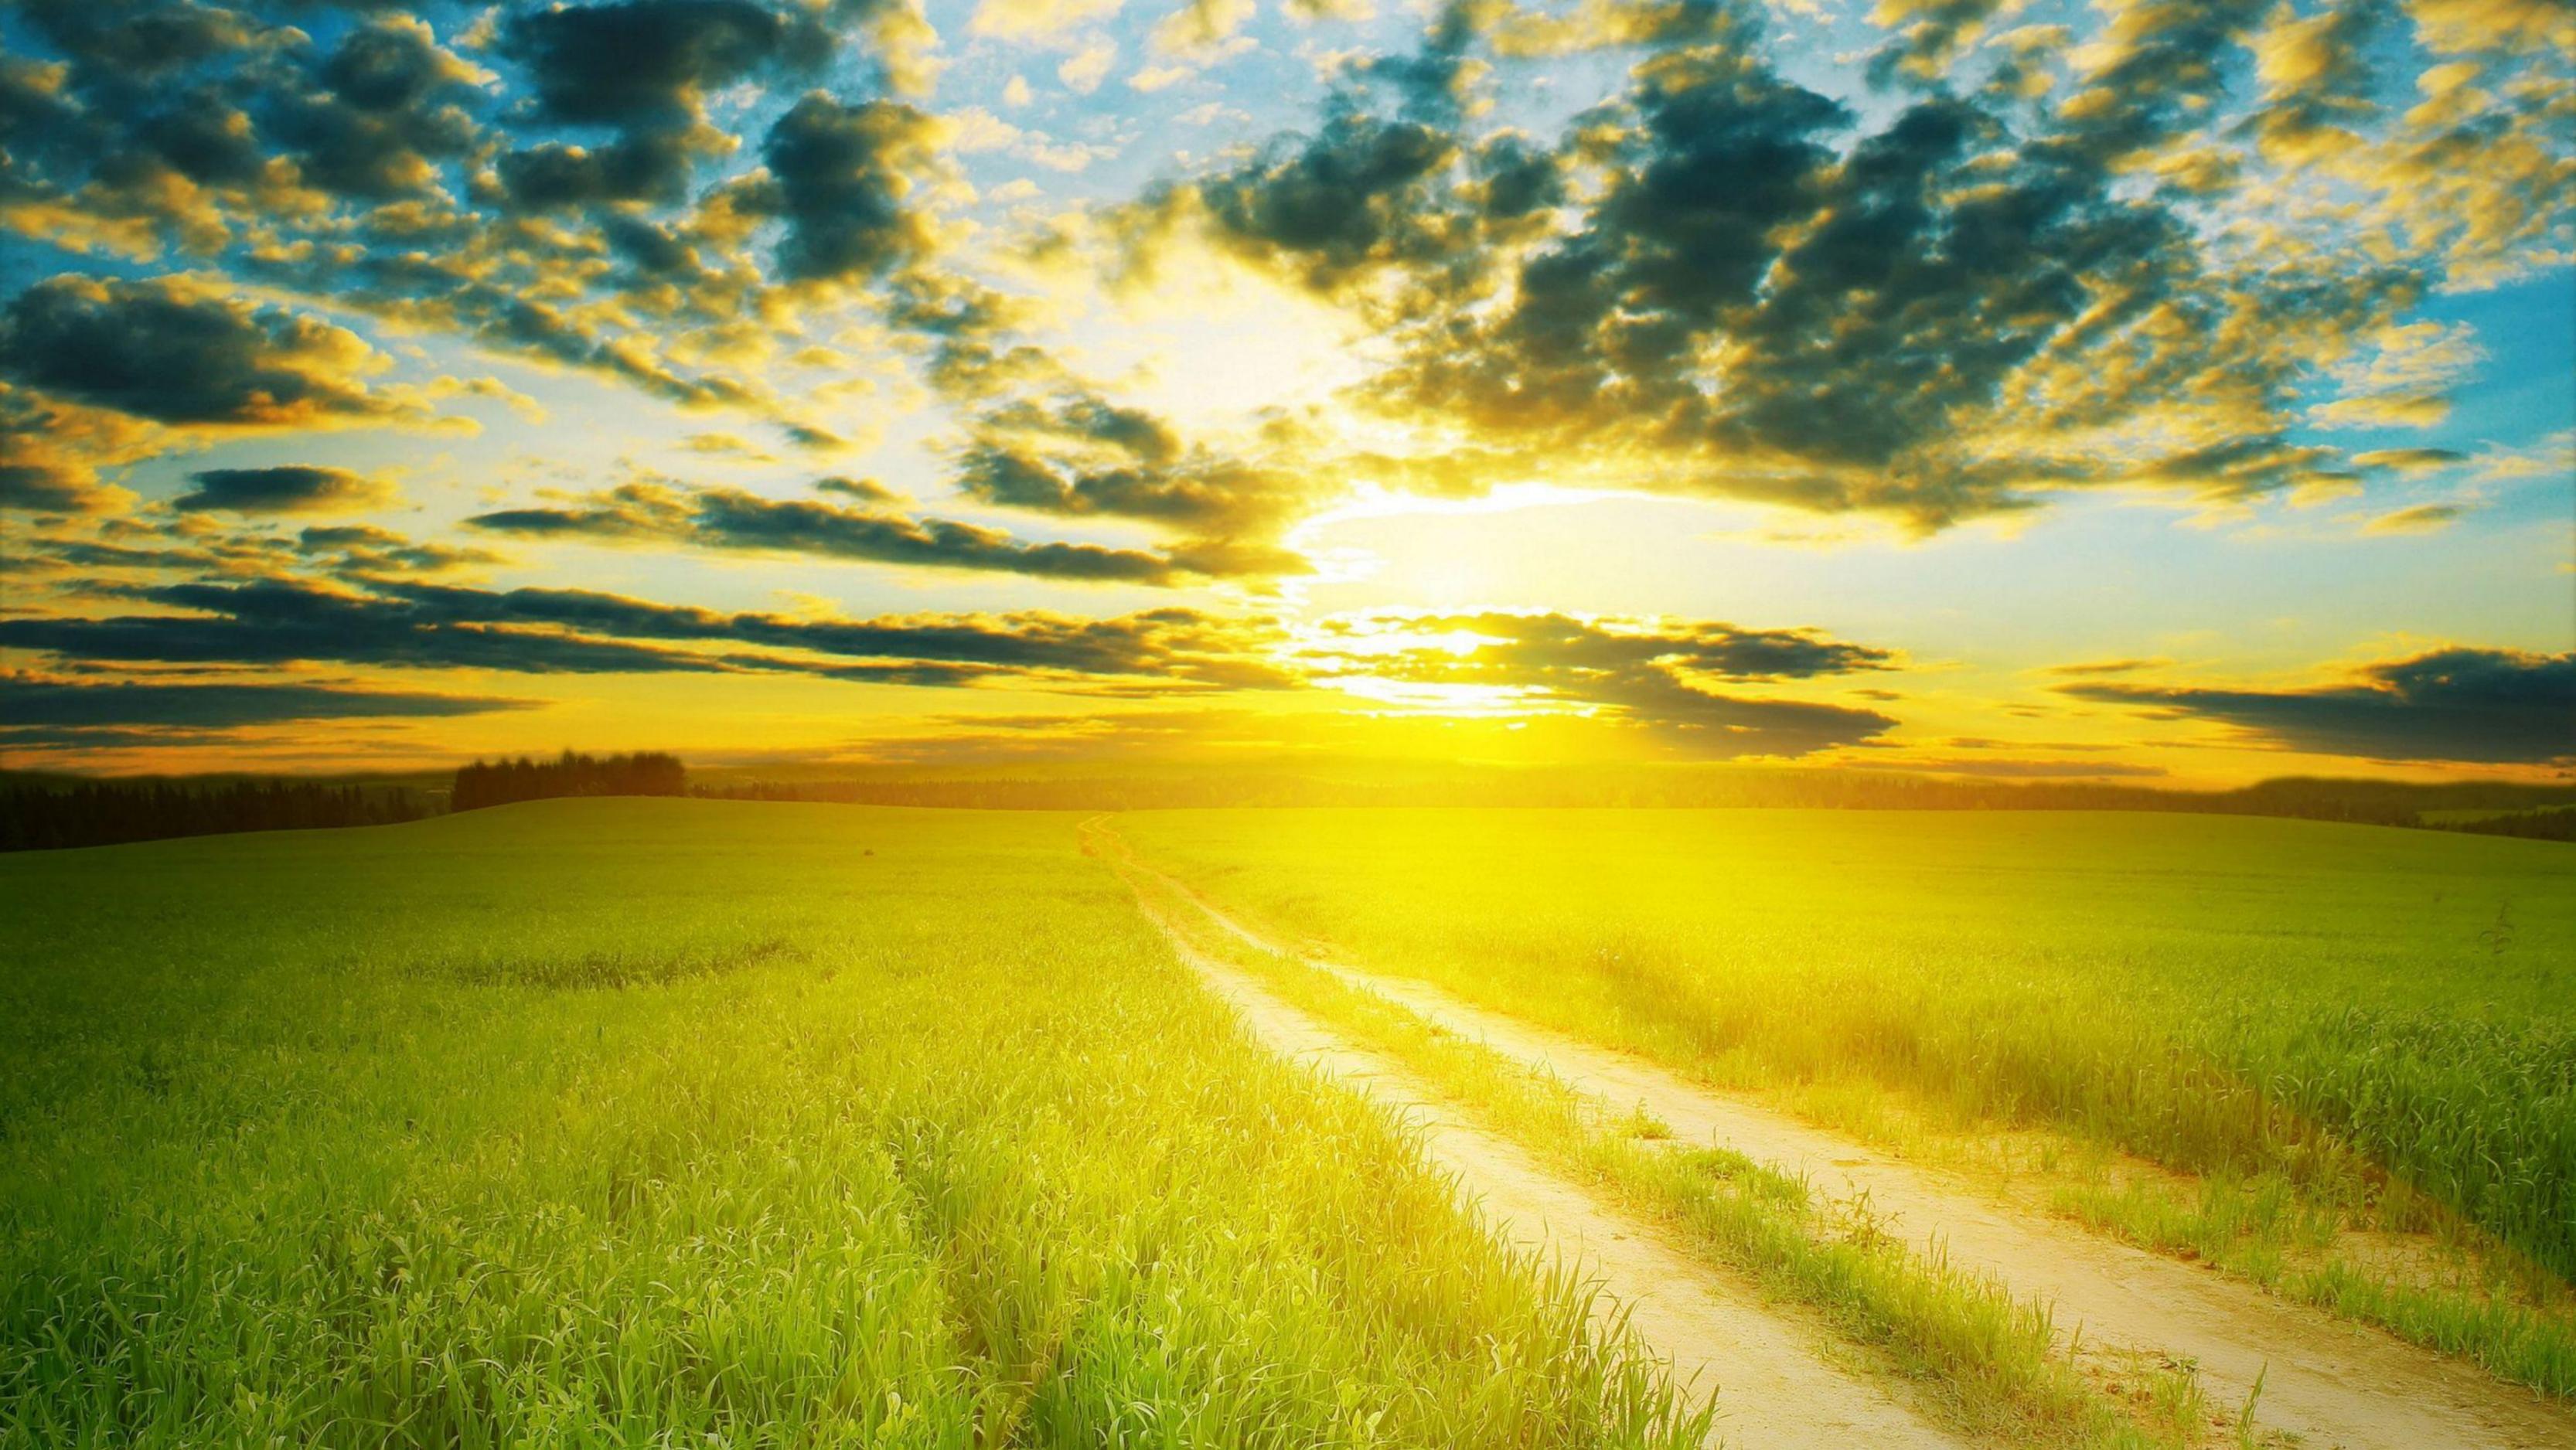

- Energy
 - idle
 - demand
- Performance
 - per language / framework

Who Am I

- Axel Roest
- software developer
- iOS & Mac
- iot enthusiast
- unix nerd

YOU

The Cloud?

Background

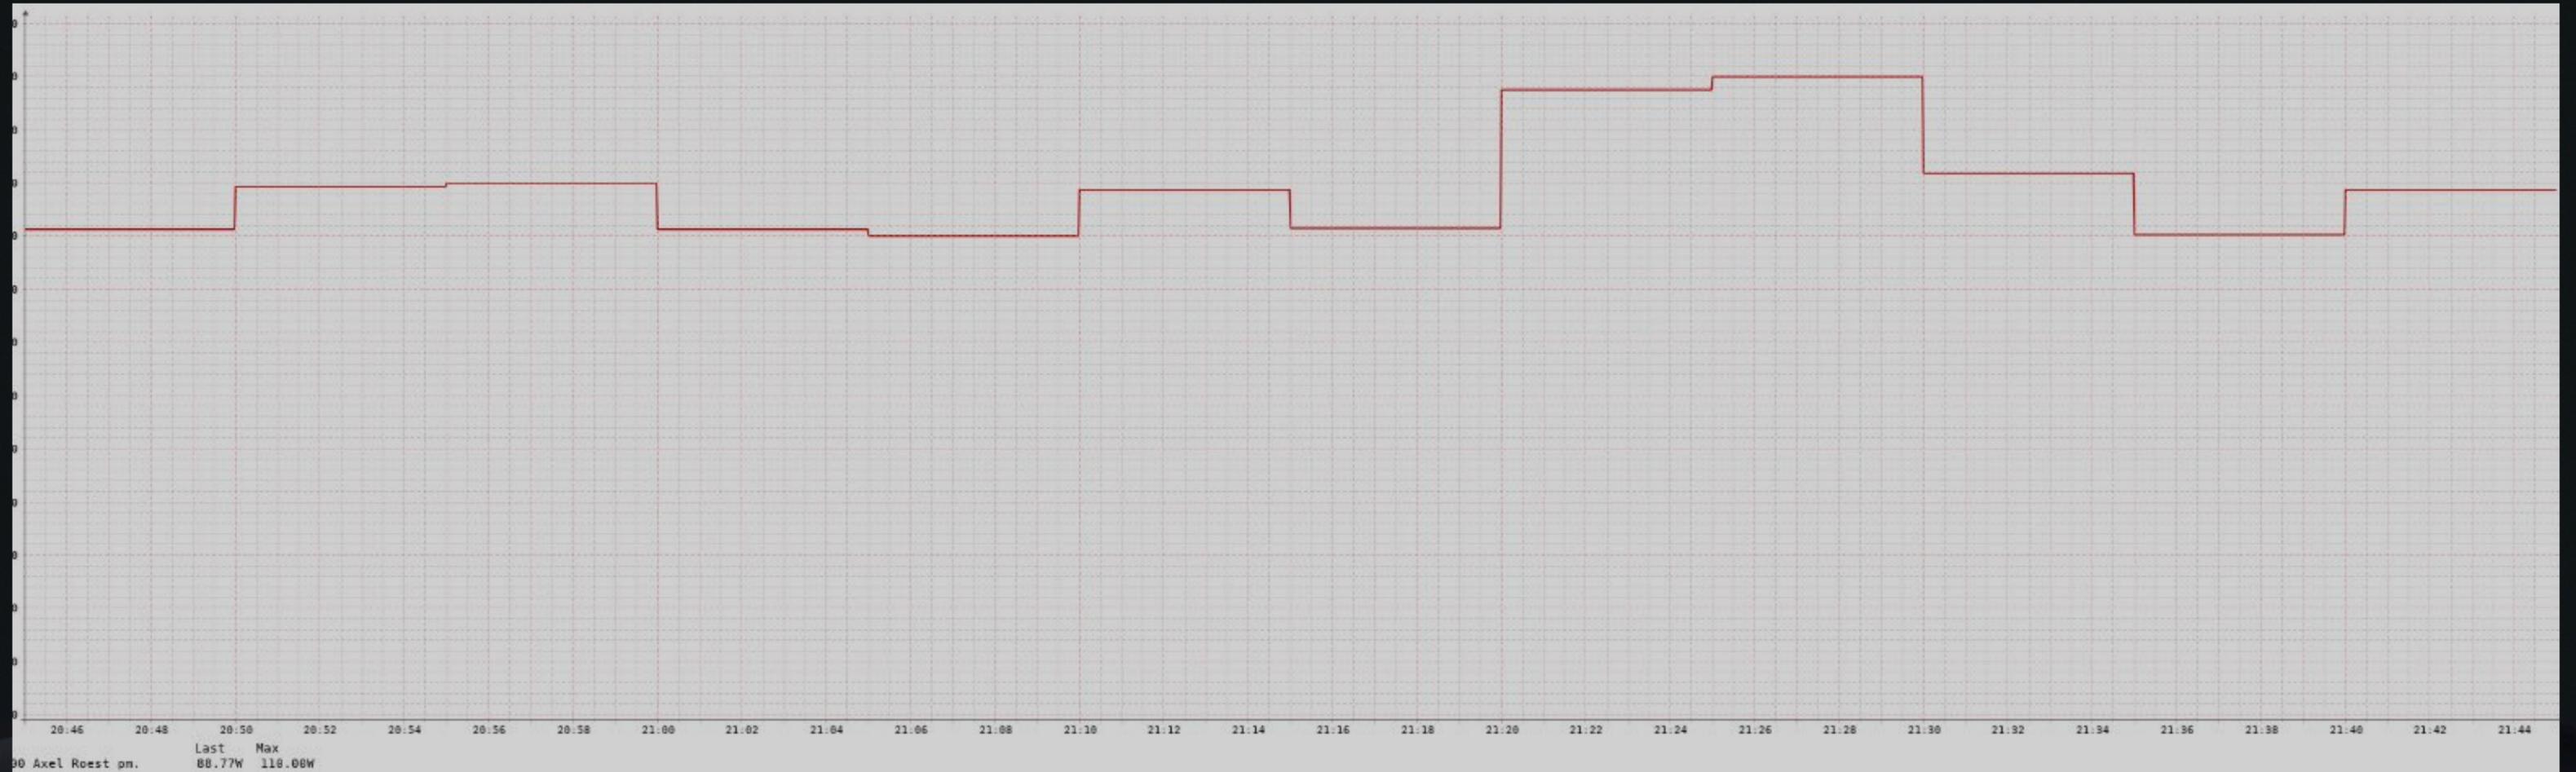

ColoClue Association

- <https://coloclue.net>
- own hardware
- advanced networking possibilities
- power measurements

Power measurements idle

Power measurements testing

Power Measurements

Power Measurements

€€€

Power Measurements

€€€

- power
- sensors
- fancontrol

Power Measurements

€€€

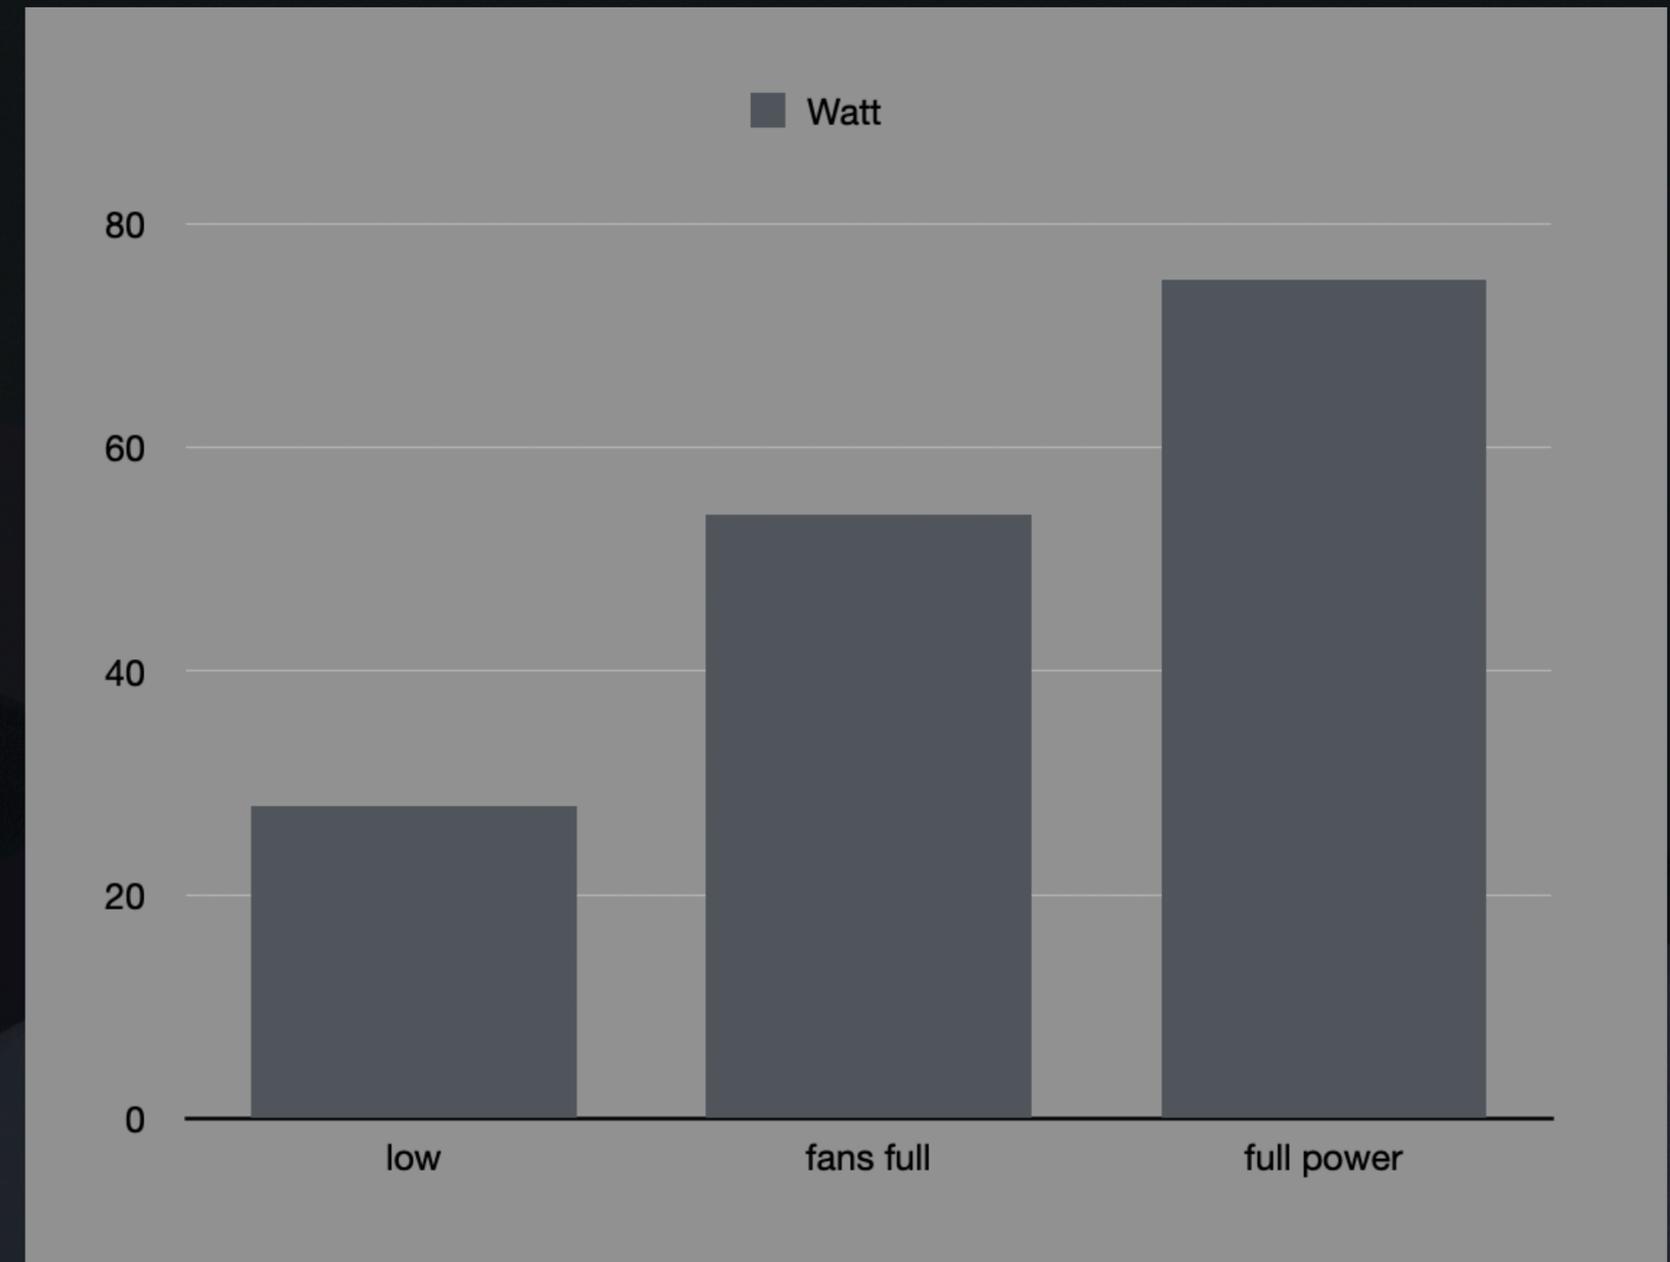

- Sonoff POWR316D
- Tasmota

Power Measurements

€€€

- fans off → 28W
- on → 54W → double!
- in demand → 78W

Software

Impact of Web Technology

Efficiency?

- Most prolific web languages
 - nodejs
 - php
 - java
 - swift

Efficiency

- requests → responses
 - speed
 - load
 - timeouts (2 seconds)

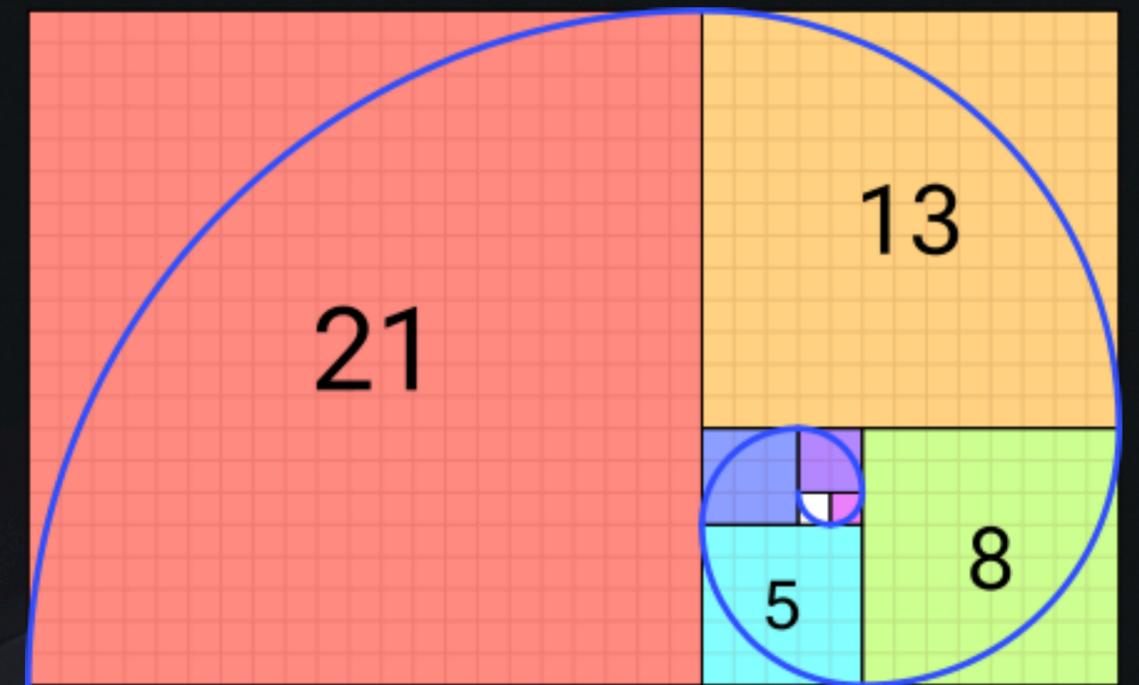

How

Test Benchmarks

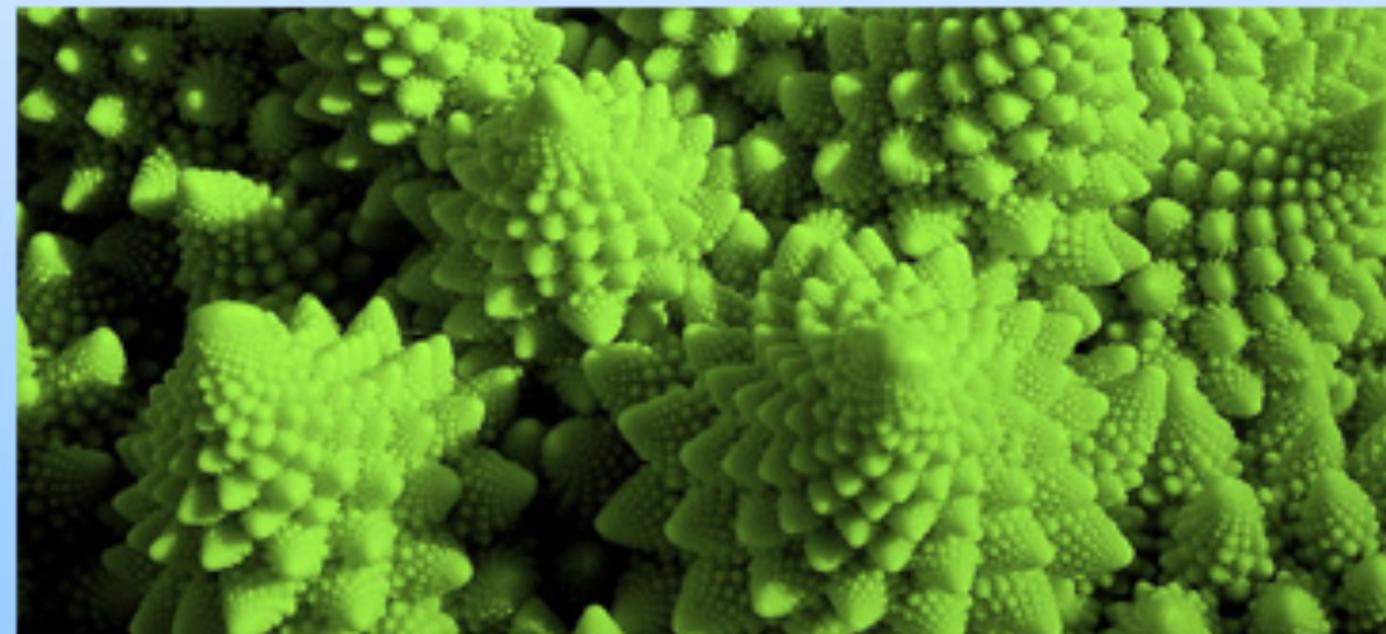

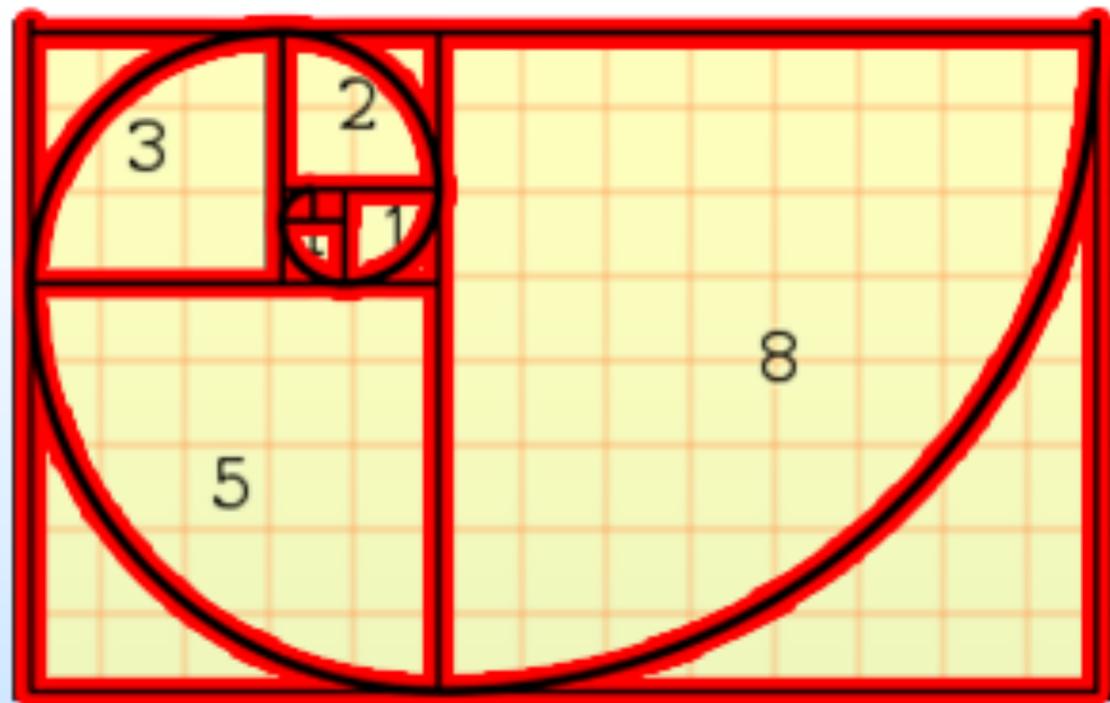

- algorithm with low bandwidth requirements
- no database
- 'pure function'
- → fibonacci sequence

Fibonacci

- 0, 1
- $n + n-1$
- $0 \rightarrow 1 \rightarrow 1 \rightarrow 2 \rightarrow 3 \rightarrow 5 \rightarrow 8 \rightarrow \dots \rightarrow$

Golden Ratio

Disclaimer

I am not a pro web developer

- javascript
- php
- java
- swift only

ChatGPT!

ChatGPT!

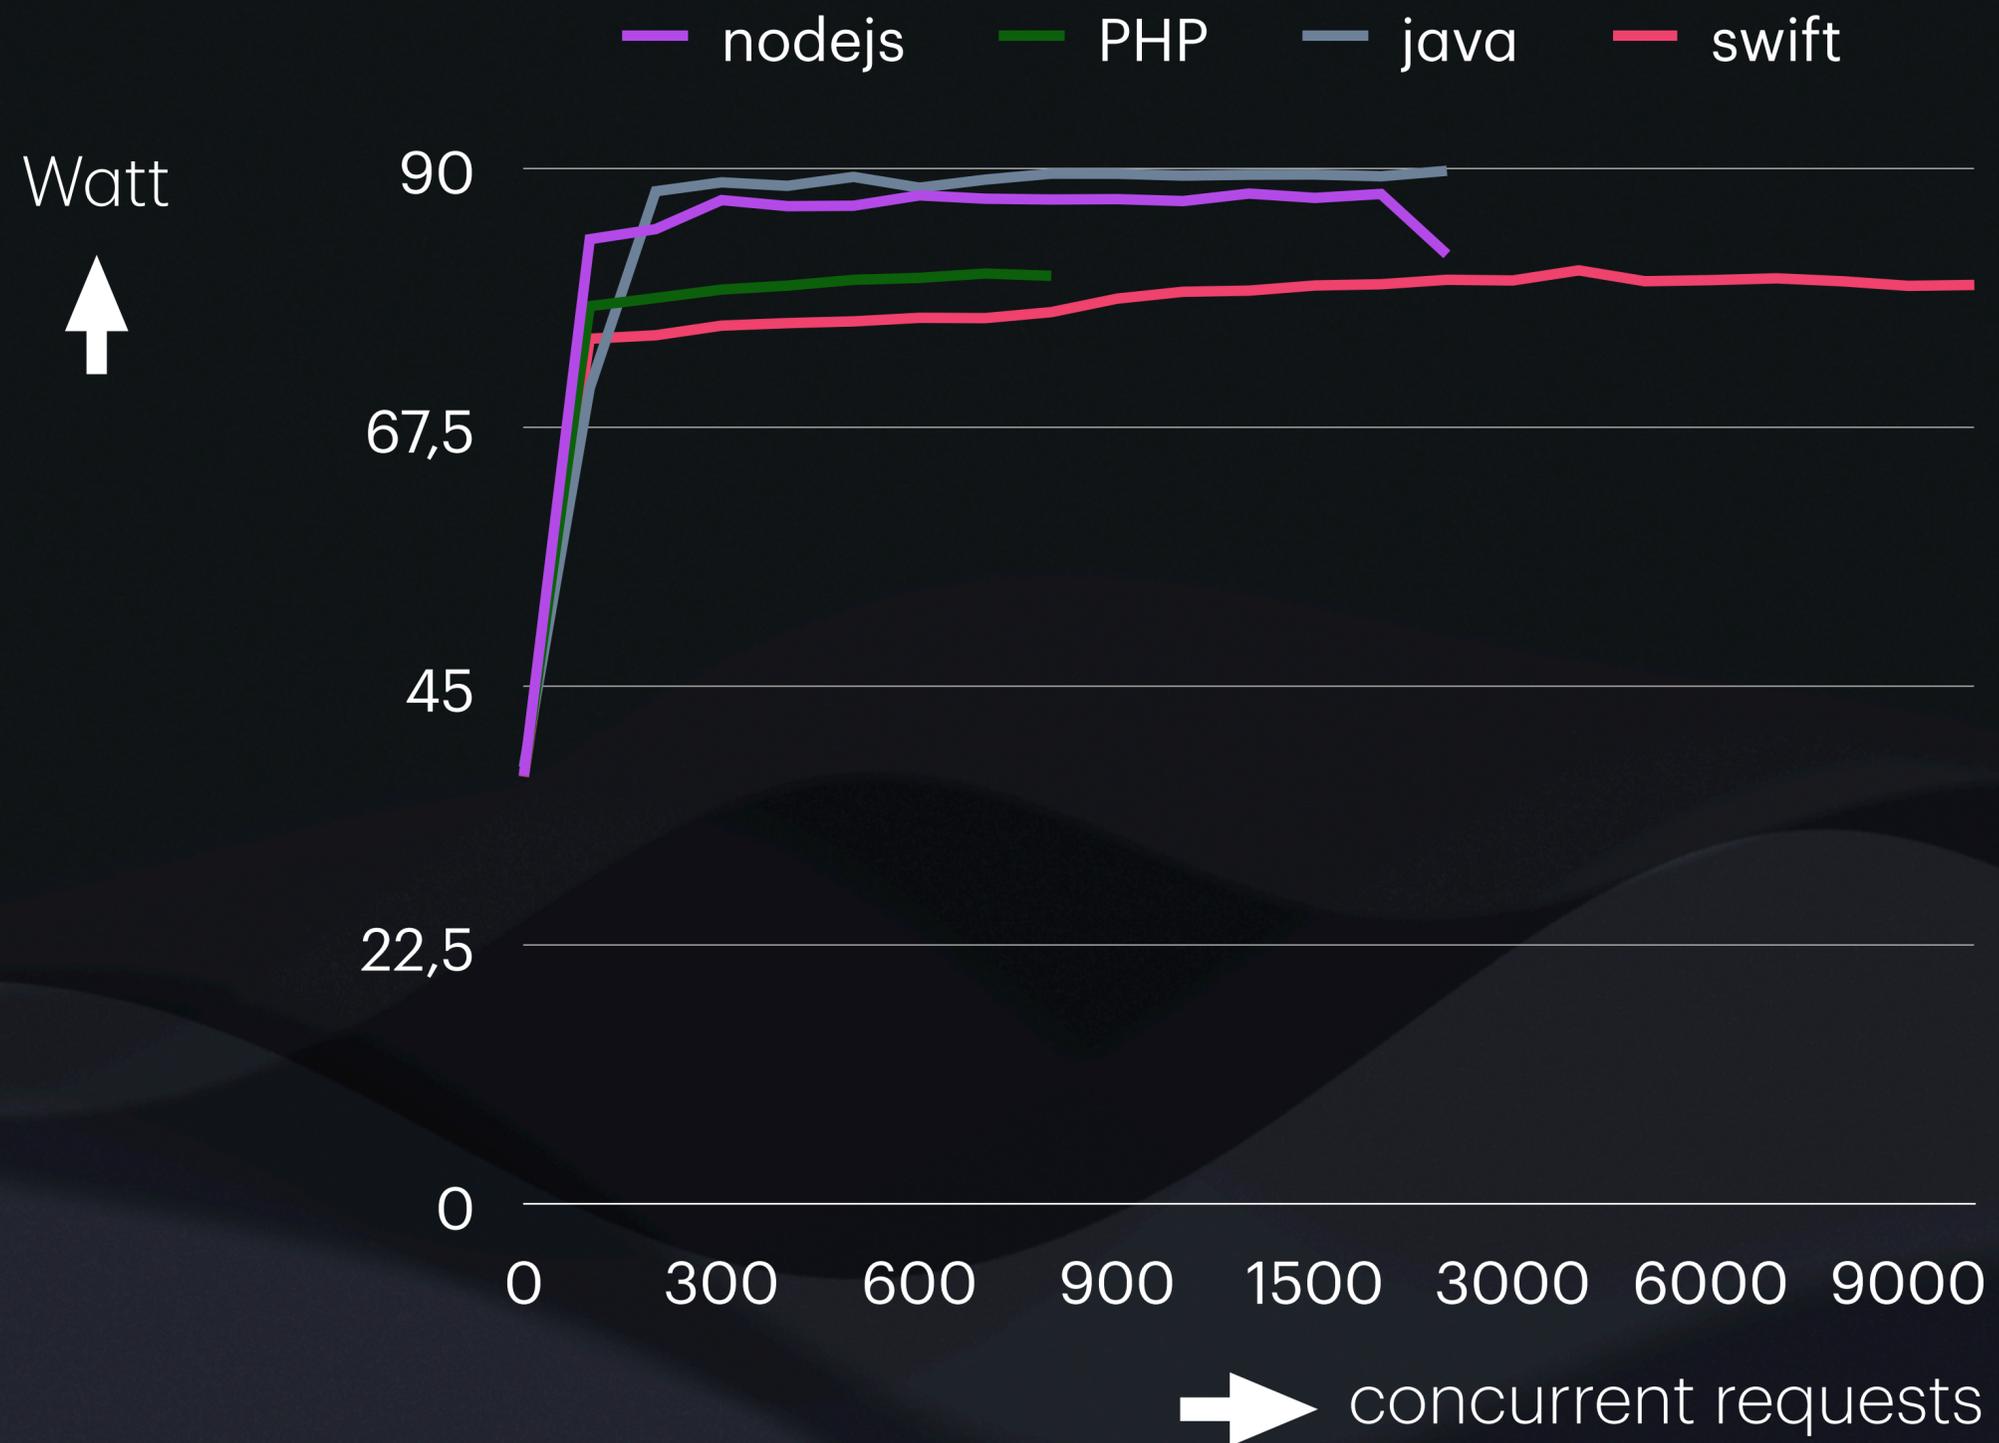

- javascript & php

- java

Power Measurements 2

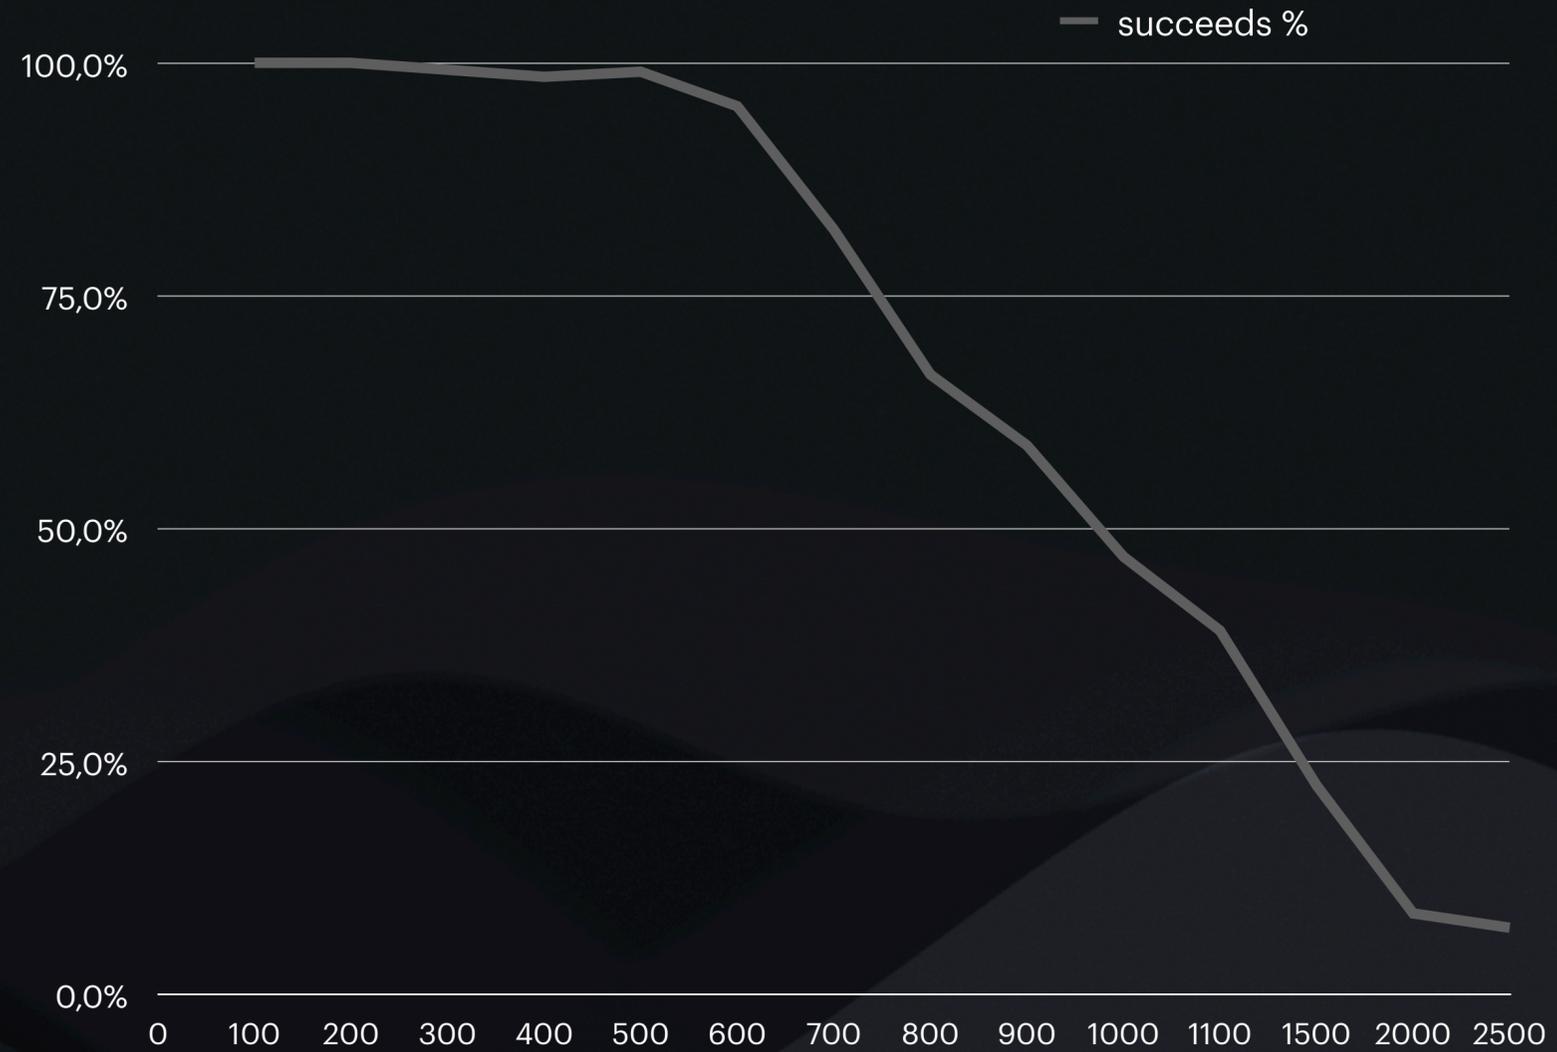

- Power ↑↑,
- amount of work is different per technology

Power

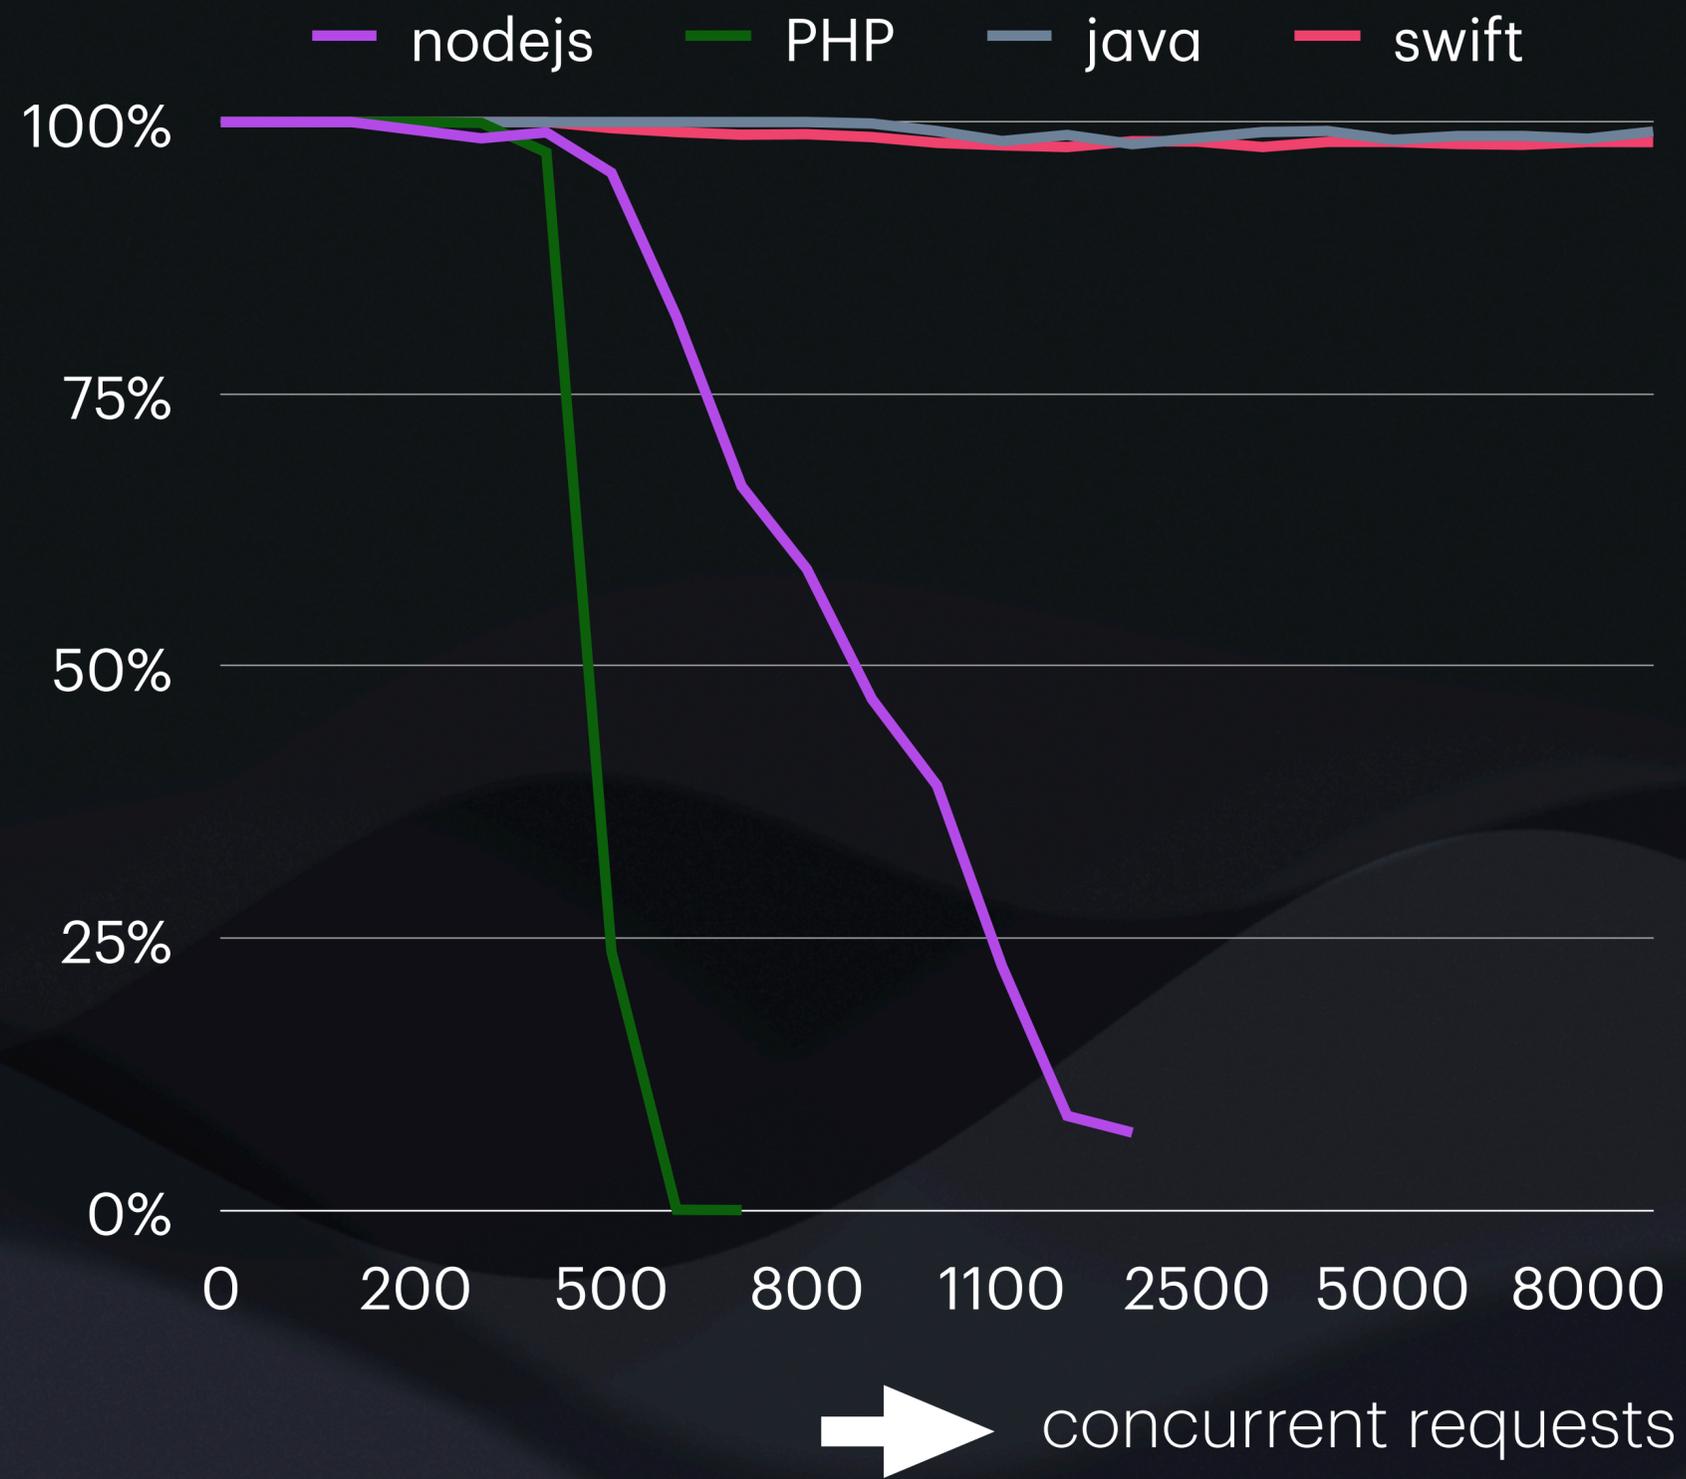

Responses

answers

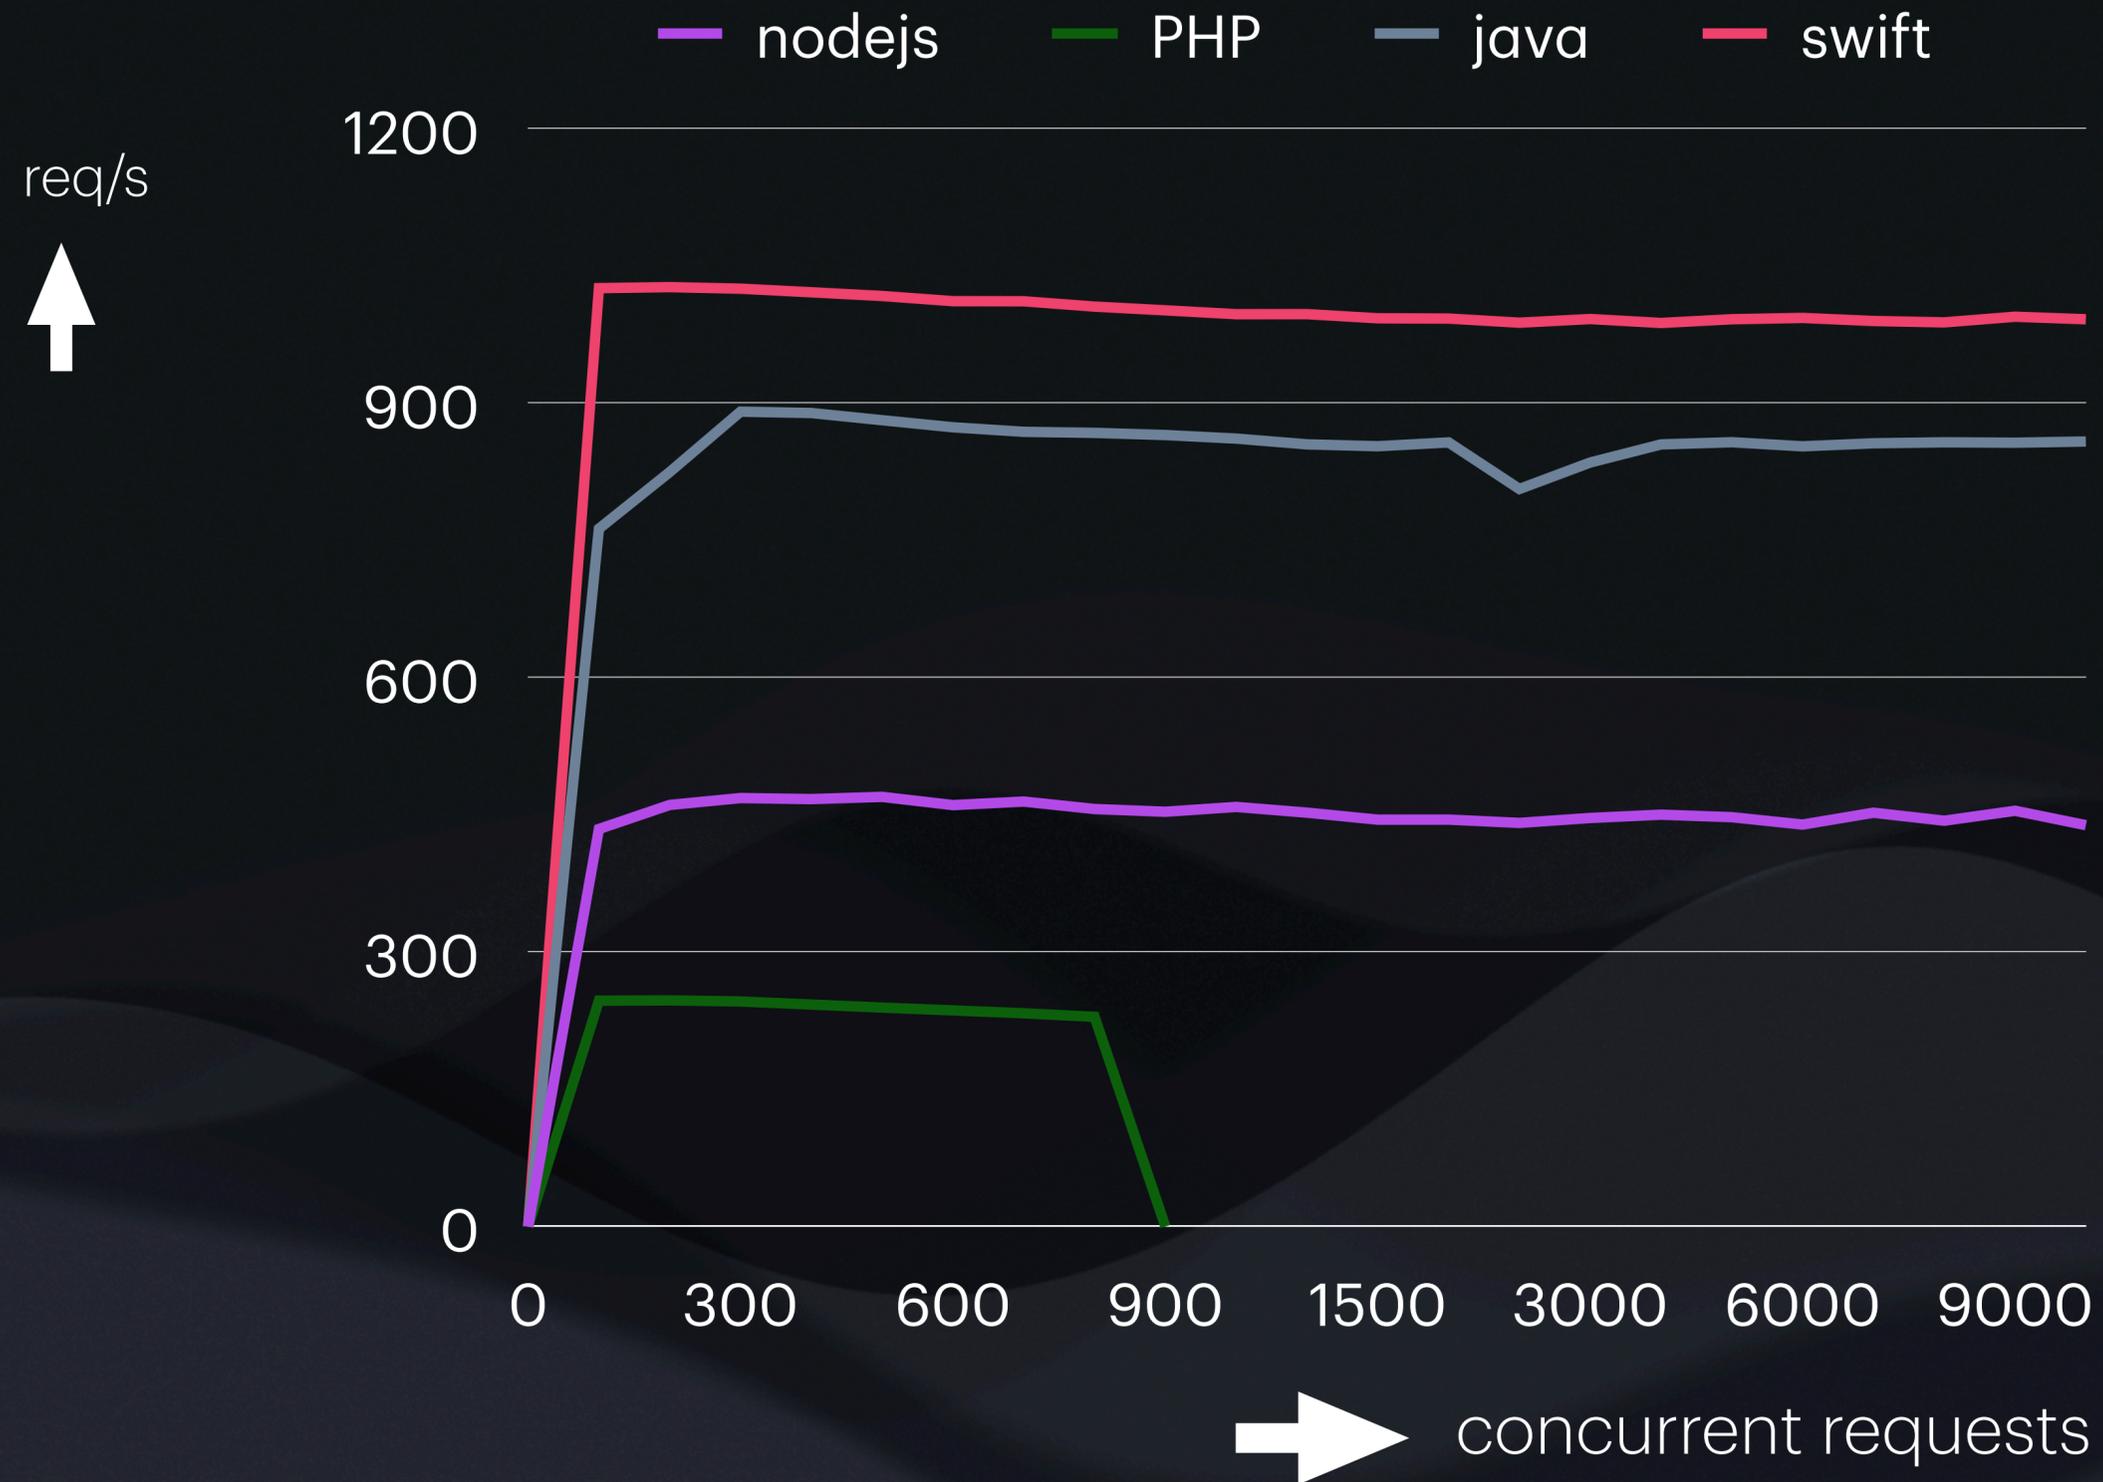

concurrent requests

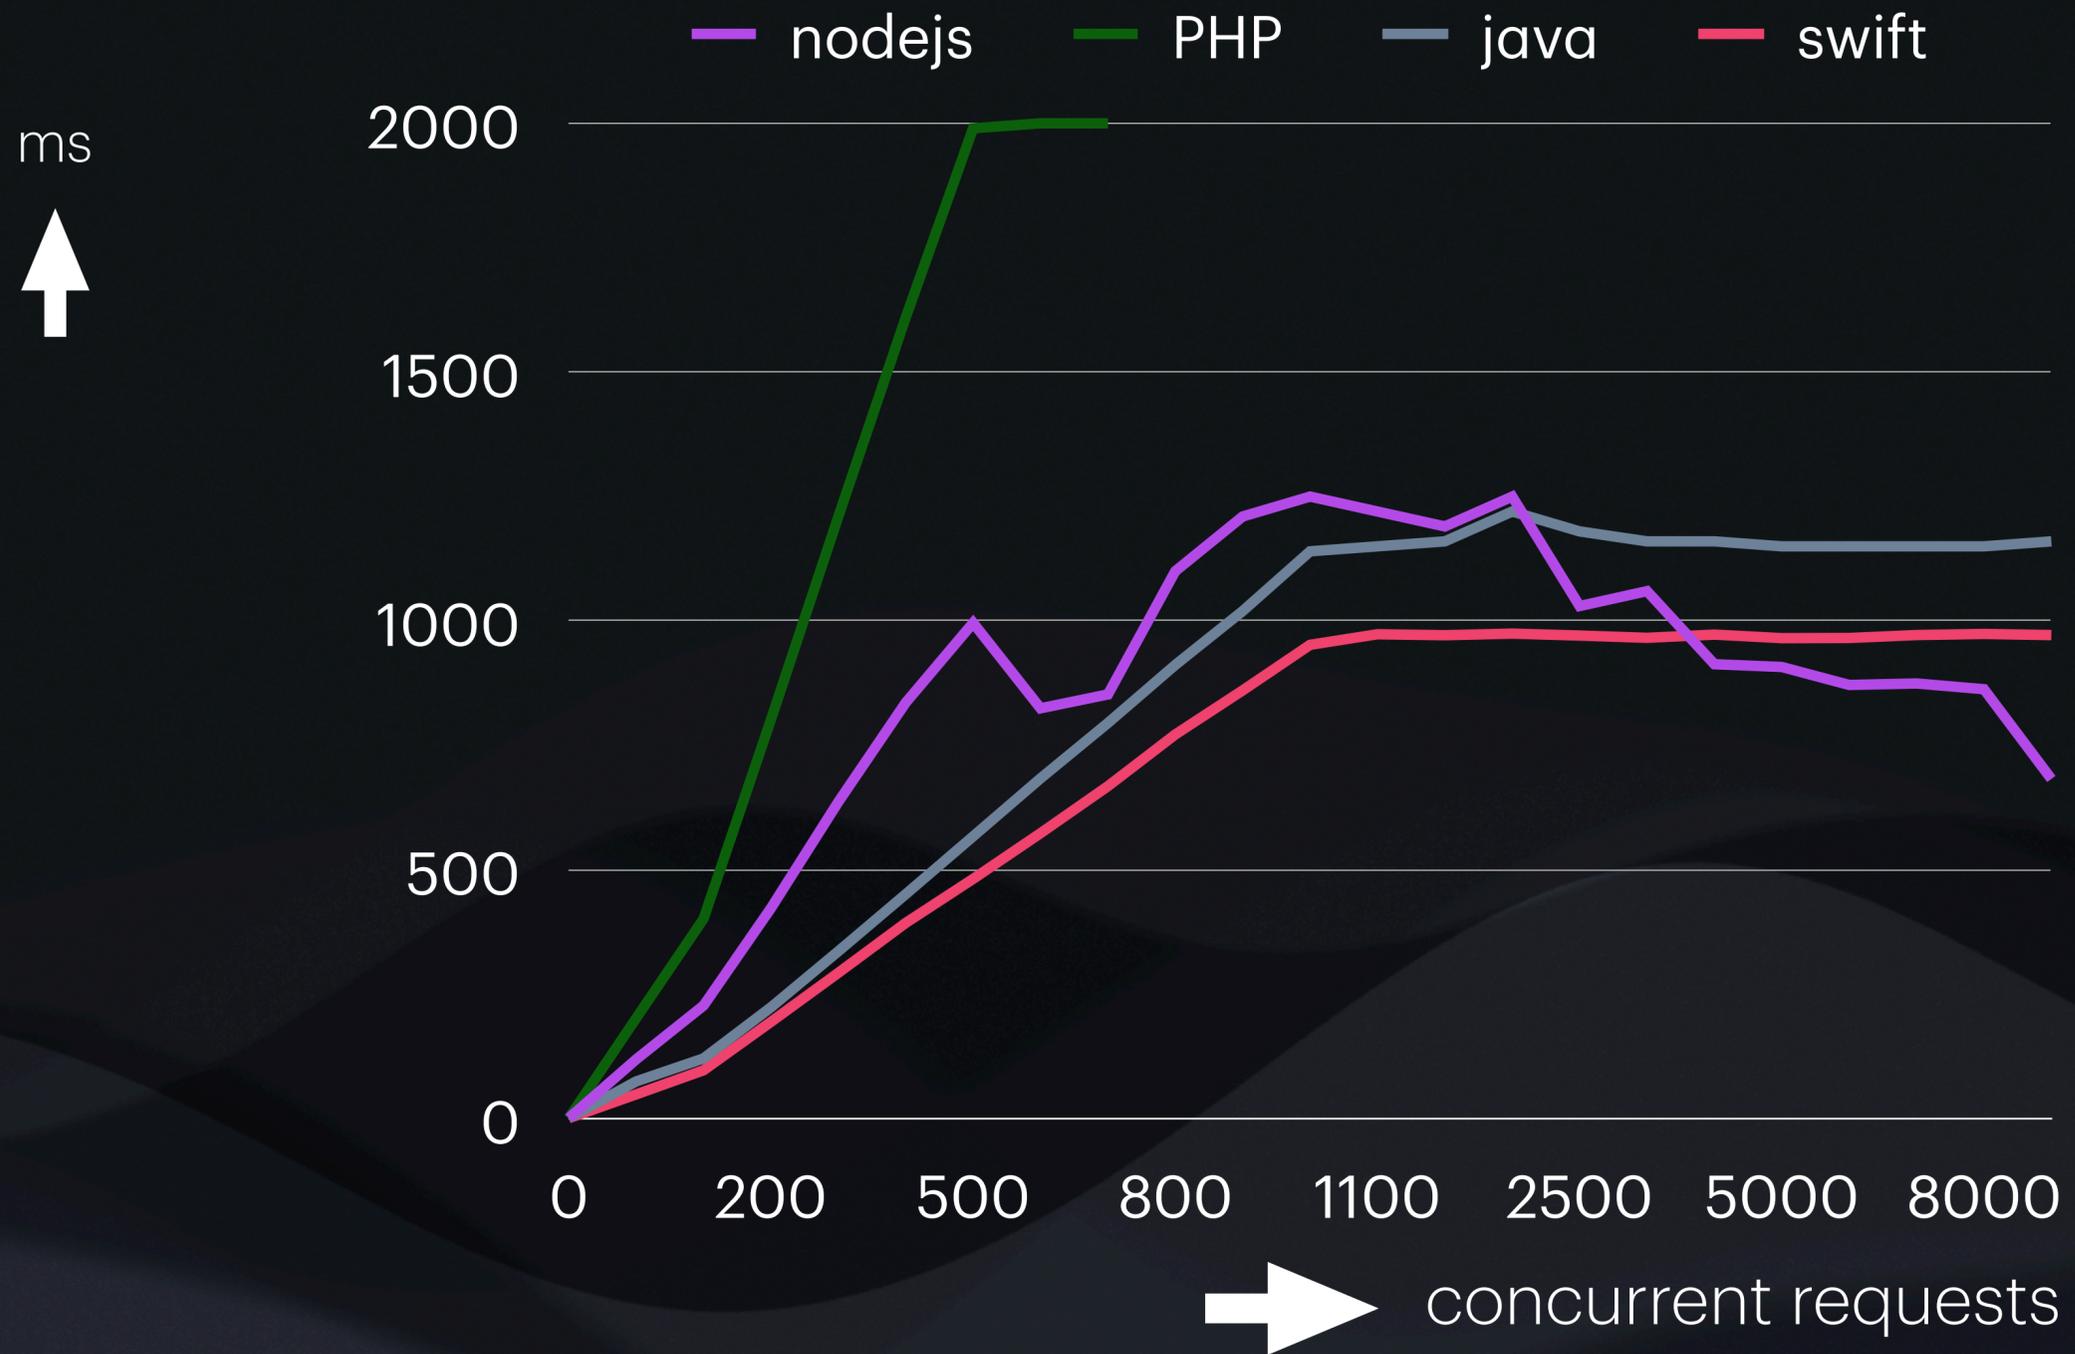

Answers

Concurrent Requests

Latency

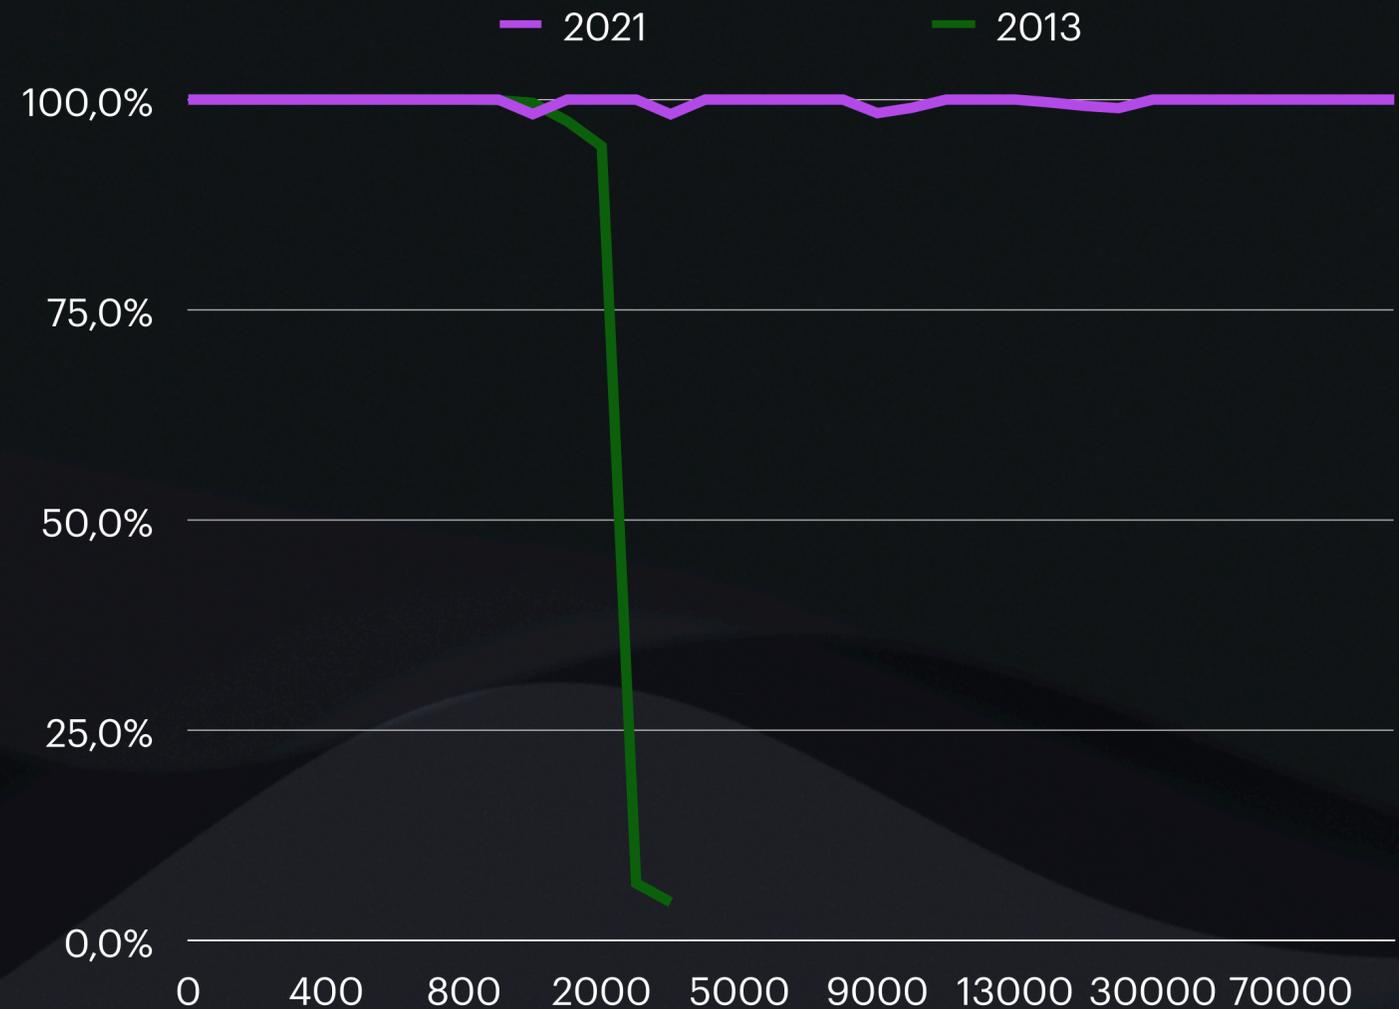

swift?

Technologies matter!

Performance

- use more modern computers, this one is from 2013!
- Newer CPU → more performance → less hardware
- Intel/AMD → ARM

Newer hardware (2021) - java

➔ concurrent requests

Conclusion

- use appropriate tech
 - different language: 20% less power
 - adding servers?
 - or a different tech stack?
- If your idle server runs fans full blast → slow down
